AI Use Disclosure Agreement

Campus Equipment Borrowing and Inventory System

Bulacan State University | Prepared 25 October 2026

UNSIGNED DRAFT - proponents must review
This declaration is prepared from the supplied project conversation and the current submission work. It is not an institutional approval, a signed statement or a certification that all assistance complied with instructor policy. All proponents must verify/amend it before signing. No proponent signature or student identifier has been invented.

1. Assistance disclosed

The available project conversation establishes use of OpenAI ChatGPT/Codex as an AI assistant for technical consultation, system design guidance, requirements clarification, coding assistance, backend logic review/refinement, debugging support, test preparation/execution support, UI refinement and documentation preparation. It includes requests concerning inventory, borrowing/return/maintenance workflows, business-rule audits and corrections, forms, access controls, reports, responsive layouts and submission packaging. This list describes known assistance categories, not a verified allocation of work among individual proponents.

Area	Known assistance and verification boundary
Requirements and design	Interpreting the official PDF, checking compliance and discussing Django MTV, physical-unit inventory and workflow/UI choices. The official PDF remains authoritative.
Code, review and debugging	Assisted changes and review were requested across the existing project. The group must inspect and understand the final source rather than claiming AI suggestions are correct by default.
Testing and QA	Existing permanent tests were executed in an isolated environment for this package: 524 PASS. Test-case documentation maps specification clauses to actual results and marks unexecuted/blocked evidence.
Documentation and packaging	AI-assisted generation of the README, four PDFs, rendered diagrams, schema-based dictionary, traceability and user instructions. Actual UI screenshots were captured from a copied fictional runtime.
This preparation run	Application source/business logic and working development data were preserved. No Git commit, push or deployment occurred. Signatures, acceptance outcomes and team contributions were not fabricated.

2. Proponent responsibility

By signing after review, each proponent confirms that the declaration accurately describes their use and that any additional AI tools or assistance have been added. Each remains responsible for checking source correctness, tests, originality/attribution, privacy, permissions, limitations and the ability to explain the submitted work. A tool-generated draft does not transfer authorship accountability or establish learning outcomes.

3. Tools, assets and course-policy review

Known AI tool: OpenAI ChatGPT/Codex. Exact historic model versions, dates and individual member usage were not supplied and are not inferred. Add actual details if required by the instructor. No AI-generated bitmap illustrations were created for this submission package; diagrams are rendered from the described architecture/schema and screenshots show the actual application. The provenance of every pre-existing image/icon/snippet must still be verified by the group.

Known dependency or asset	Declaration / required action
Python/Django runtime	requirements.txt pins Django 6.1.2, asgiref 3.12.1, sqlparse 0.6.0 and tzdata 2026.5. Verify applicable upstream licensing/attribution as part of the group's release review.
Existing templates/CSS/JS/icons	Submitted as existing project source. Do not assume all assets are original group work; record actual sources, permissions and contributor attribution where relevant.
Official IT 401W PDF	Used as the mandatory requirements/evidence source; not represented as a group-authored document.
Screenshots and fictional seed	Real copied-application views using fictional accounts/assets. No credentials, working database or real private user records are included.
PDF production tools	ReportLab, pypdf/pdfplumber, Pillow and Poppler were used for artifact generation/extraction/render checks. They are preparation tools, not new application dependencies.

The official PDF requires disclosure of permitted AI assistance and reused code/assets under the BulSU AI Policy and instructor instructions. The actual policy ruling/approval has not been supplied. Proponents must obtain the applicable instructions, correct this draft if necessary and record actual review. No signature below signifies institutional approval by itself.

4. Items to complete before signing

1. Enter the actual section and verified five-to-six-member roster; add student identifiers only in the intended private academic submission.

2. Record additional AI tools, material assistance and pre-existing asset/code sources not established by this conversation.

3. Read and confirm the applicable instructor/BulSU AI policy with the authorized reviewer; retain any real approval/instruction record.

4. Each member reviews the submitted source and evidence, understands their actual contribution, and signs/dates personally. Do not copy or generate signatures.

Section: _____

Additional tools/assistance or asset sources (attach an actual register if needed):

_____
_____

5. Proponent acknowledgement

I have reviewed and, where necessary, corrected the assistance declaration. My signature records my own acknowledgement only. I accept responsibility for the accuracy of my declared contribution and my ability to explain the submitted work, subject to the actual course requirements. These fields intentionally remain blank in the prepared package.

Proponent 1

Printed name: _____

Student identifier: _____

Signature: _____ Date: _____

Proponent 2

Printed name: _____

Student identifier: _____

Signature: _____ Date: _____

Proponent 3

Printed name: _____

Student identifier: _____

Signature: _____ Date: _____

Proponent 4

Printed name: _____

Student identifier: _____

Signature: _____ Date: _____

Proponent 5

Printed name: _____

Student identifier: _____

Signature: _____ Date: _____

Proponent 6

Printed name: _____

Student identifier: _____

Signature: _____ Date: _____

Use only the applicable five or six verified member entries. Leave an unused sixth entry blank for a five-member group.

Policy / instructor review record (to be completed by an authorized person)
Applicable instruction/reference: _____ Review date and reviewer, if required: _____ This preparation has not supplied or simulated an instructor signature or approval.
